

AVILOO RECEIVES PRESTIGIOUS CERTIFICATION FOR FLASH TEST FROM CARA EUROPE

PRESS RELEASE
Wiener Neudorf
Mai 30th, 2023

The [AVILOO FLASH Test](#), the fastest comprehensive battery test in the world, has been officially certified by [CARA Europe \(Car Remarketing Association Europe\)](#). The CARA certificate, valid as of June 1, 2023, confirms that the FLASH test meets the numerous requirements of the CARA Battery Health Working Group.

CARA Europe is an independent, non-profit organization that supports the used car market. The CARA Battery Health Working Group was established to support the remarketing and proper valuation of used electric vehicles by increasing confidence in batteries as their key components.

The AVILOO FLASH has passed all tests of this rigorous quality assessment, including the General Conditions of Use, Technical Explanation, Test Presentation and Market Coverage categories. Certification by CARA Europe confirms the quality of the FLASH test and provides AVILOO customers with the assurance that their batteries meet CARA's high standards.

The "Battery Health Check CARA Approved" certification system, which was newly introduced this year, aims to create clear and transparent conditions for a smooth development of the market for used electric vehicles.

"Certification by such a prestigious institution is an exceptional confirmation of our many years of dedicated work and our efforts to ensure transparency and maximum safety for all our customers with regard to the traction batteries of their electric vehicles. We are very grateful that the quality of our products is recognized by a highly specialized professional audience," says [Wolfgang Berger](#), co-founder and CSO of AVILOO Battery Diagnostics.

The certification by CARA Europe is an important milestone for AVILOO Battery Diagnostics and underlines the company's commitment to the highest quality and reliability standards. As a global leader in battery diagnostics, AVILOO will continue to work hard to set the highest standards in battery diagnostics and provide the best products and services to customers worldwide.

The FLASH Test is a comprehensive battery test that determines the condition of traction batteries in just three minutes and reports it in a vendor-independent report with the AVILOO score. The test is particularly suitable for companies interested in fast, cost-effective solutions, such as leasing companies, car dealers and testing companies.
